Chapter 1

Namespace Index

1.1 Namespace List

Here is a list of all namespaces with brief descriptions:

drivetrain	7
math	7

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

drivetrain::differential_drive	9
drivetrain::motion_profile	10
drivetrain::point	11

Chapter 3

File Index

3.1 File List

Here is a list of all files with brief descriptions:

src/drivetrain/ drivetrain.h	13
src/util/ math.h	13

Chapter 4

Namespace Documentation

4.1 drivetrain Namespace Reference

Classes

- class [differential_drive](#)
- class [motion_profile](#)
- struct [point](#)

Functions

- `std::pair< motion_profile, motion_profile > diffprofile (std::vector< point > points, double w)`
Generate differential drive motion profile.

4.1.1 Function Documentation

4.1.1.1 `std::pair<motion_profile, motion_profile> drivetrain::diffprofile (std::vector< point > points, double w)`

Generate differential drive motion profile.

Parameters

<i>points</i>	coordinates of motion
<i>w</i>	distance between left and right wheels

4.2 math Namespace Reference

Functions

- double [wrapping_limit](#) (double value, double min, double max)
Enforces a wrapping limit on value.

4.2.1 Function Documentation

4.2.1.1 `double math::wrapping_limit(double value, double min, double max)` `[inline]`

Enforces a wrapping limit on value.

Wrapping is a constraint in which a minimum is equal to a maximum, and values exceeding either limit "wraps" to the other extremum. An example is angles. The angles 0, and 2π are equal in angles, so you may enforce a wrapping limit when checking for a value such as π .

Parameters

<i>value</i>	value to limit
<i>min</i>	minimum value
<i>max</i>	maximum value

Chapter 5

Class Documentation

5.1 drivetrain::differential_drive Class Reference

```
#include <drivetrain.h>
```

Public Member Functions

- [~differential_drive](#) ()
- [template<typename T > drivetrain::differential_drive fromMotors](#) (std::vector< unsigned > left, std::vector< unsigned > right)
creates differential drive given a motor-type and ids

Static Public Member Functions

- [template<typename T > static drivetrain::differential_drive fromMotors](#) (std::vector< unsigned > left, std::vector< unsigned > right)
creates differential drive given a motor-type and ids

5.1.1 Constructor & Destructor Documentation

5.1.1.1 drivetrain::differential_drive::~~differential_drive ()

5.1.2 Member Function Documentation

5.1.2.1 [template<typename T > static drivetrain::differential_drive drivetrain::differential_drive::fromMotors](#) (std::vector< unsigned > *left*, std::vector< unsigned > *right*) [static]

creates differential drive given a motor-type and ids

5.1.2.2 `template<typename T > drivetrain::differential_drive drivetrain::differential_drive::fromMotors (std::vector< unsigned > left, std::vector< unsigned > right) [inline]`

creates differential drive given a motor-type and ids

The documentation for this class was generated from the following file:

- `src/drivetrain/drivetrain.h`

5.2 drivetrain::motion_profile Class Reference

```
#include <drivetrain.h>
```

Public Member Functions

- `motion_profile ()`
- `~motion_profile ()`
- `double operator() (double t)`
Retrieves velocity at a time.

Friends

- `std::pair< motion_profile, motion_profile > profile (std::vector< point >)`

5.2.1 Constructor & Destructor Documentation

5.2.1.1 `drivetrain::motion_profile::motion_profile () [inline]`

5.2.1.2 `drivetrain::motion_profile::~~motion_profile () [inline]`

5.2.2 Member Function Documentation

5.2.2.1 `double drivetrain::motion_profile::operator() (double t)`

Retrieves velocity at a time.

Parameters

<i>t</i>	time
----------	------

5.2.3 Friends And Related Function Documentation

5.2.3.1 `std::pair<motion_profile, motion_profile> profile (std::vector< point >) [friend]`

The documentation for this class was generated from the following file:

- `src/drivetrain/drivetrain.h`

5.3 drivetrain::point Struct Reference

```
#include <drivetrain.h>
```

Public Attributes

- double `x`
- double `y`

5.3.1 Member Data Documentation

5.3.1.1 `double drivetrain::point::x`

5.3.1.2 `double drivetrain::point::y`

The documentation for this struct was generated from the following file:

- `src/drivetrain/drivetrain.h`

Chapter 6

File Documentation

6.1 src/drivetrain/drivetrain.h File Reference

```
#include <vector>
#include <utility>
#include "../util/math.h"
#include "WPILib.h"
Include dependency graph for drivetrain.h:
```

6.2 src/util/math.h File Reference

This graph shows which files directly or indirectly include this file:

Namespaces

- [math](#)

Macros

- `#define` [PI](#) 3.141592654

Functions

- double [math::wrapping_limit](#) (double value, double min, double max)
Enforces a wrapping limit on value.

6.2.1 Macro Definition Documentation

6.2.1.1 `#define` [PI](#) 3.141592654
